COMPLICE

Burglary Protection Solution

To protect personal valuables and important documents, Fichet-Bauche has designed the Comply range of security safes for the home and office.

Did you know?

The locks used on safes must also be certified to ensure that the safe maintains the correct level of burglary protection

Product Overview

Comply is available in four sizes, from 10 up to 80 litres, as either a free-standing or in-the-wall safe. As an option, the safes can be ordered with a slot above the door for the quick and easy deposit of documents or envelopes into the safe without having to open the door.

The safe's door and hinges have been ergonomically designed and have undergone repetitive operational tests to ensure their durability. With a wide range of fittings available, Comply's interior storage space can be used to the full.

Burglary Protection

Comply has been awarded the A2P label by CNPP (National Centre for Prevention and Protection) and has been certified by ECB•S for Grade 0 burglary resistance in accordance with the European standard, EN 1143-1. This corresponds to an insurable value of €8000.

Locks

Comply safes have been designed to be equipped with Fichet-Bauche's patented mechanical and electronic locks. All the locks are A2P/EN 1300 certified.

MxB – level B/E – is a high-security mechanical lock. Due to the innovative shape and design of the key, over 10 million different possible keys can be manufactured, making replication extremely difficult. For added security, a blocking system prevents the key from being removed until the door has been properly locked.

The Nectra electronic lock – level B/E – generates more than 110 million different code combinations and offers several levels of functionality. The standard version has 1 master code and 7 user codes, wrong-code blocking, time delay and a duress alarm. This can be upgraded with the audit trail function (which records up to 500 events) and a biometric fingerprint reader.

Optional deposit slot

Interior fittings (from top left): Shelf, extensible shelf, extensible frame for hanging files, lockable compartment, A5 file clip.

Interior Fittings

- Compline can be fitted with a shelf with enough space for a laptop.
- The Compline 80 can be fitted with a lockable compartment for extra security.
- The extensible frame for hanging files is the ideal solution for organising payroll slips, tax papers and other business documents. The two larger safes in the range, 40 and 80, can be delivered with a slot in the top of the door for the secure and simple depositing of documents or money. This is designed with an anti-retrieval system to prevent any deposits being fished back out via the slot.

Fichet-Bauche Technology

Compline derives its strength from double-thickness, sheet steel walls, a reinforced 87mm door and a specially designed, extra-tough mineral composite. The safe is locked by a single thick steel bolt running the height of the door. When subjected to attack by mechanical or thermal tools, the lock is completely blocked by a relocking mechanism.

As an option, Compline can be connected to your alarm system so that a warning will sound if the safe door is accidentally left open.

Burglary Testing Procedure

In order to obtain the EN 1143-1 classification, Compline has been subjected to a series of stringent break-in tests using a variety of tools.

Test Verification

Once tested, products are analysed by the test laboratory in order to verify that they correspond to the technical drawings delivered prior to the test.

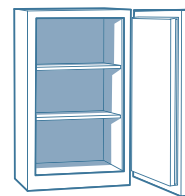

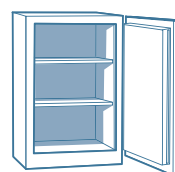

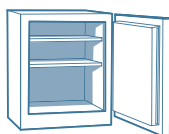

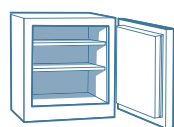

Compline is suitable for the home and can be mounted into a wall (left) or installed as a free-standing safe (above).

Fichet-Bauche Guarantee

Fichet-Bauche products are designed and manufactured in accordance with the ISO 9001 standard for Quality Management Systems and ISO 14000 for Environmental Management Systems. All Compline safe components are tested by the Fichet-Bauche laboratory in compliance with the current European standards.
